HIVAMAT® 200

Deep Oscillation Therapy

HIVAMAT Deep Oscillation Therapy is a revolutionary therapeutic treatment device that can treat swelling, relieve soft tissue pain and help an injury recover faster.

Ideal for conditions such as:

- Muscle tension, spasms, and cramps
- Numbness, tingling, and other indications of pinched nerves
- Whiplash and other trauma
- Joint sprains, muscle strains, and sports injuries
- Tennis elbow, tendonitis, and other repetitive movement issues
- Arthritis, bursitis and other degenerative joint concerns
- Swelling of the feet and legs, hands and arms, as well as other regions

How does it work?

The HIVAMAT 200° makes use of a unique and safe alternating electrostatic field to very quickly — but gently — pull up and down the tissues under the practitioner's hands. The body parts that are powerfully affected include skin, muscle, blood vessels, and connective tissue. The low-frequency electrostatic field creates a soft pulsating influence that can treat swelling, relieve soft tissue pain, and help an injury recover faster.

Treat swelling

Quickly and effectively treat swelling due to the rapid oscillations produced within the tissues contacted. These Deep Oscillation Therapy® pulsations enhance the movement of lymph through the lymphatic system, reducing lymphedema in the treatment area.

Relieve pain

Quickly and effectively relieve pain from muscle and connective tissue areas (such as joints) due to the fast and pronounced oscillations generated within the structures contacted. These Deep Oscillation Therapy® pulsations do three key actions: they help bring more blood to the region, providing an increase of oxygen and nutrients to minimize pain from a local decrease of oxygen (hypoxia); they help break up excess fibrous tissue (fibrosis), providing more pliability to minimize pain from restricted movement, and they help mobilize tissue substances involved with the transmission of pain through the nervous system.

Pre and post-operative therapy

With HIVAMAT® therapy, swelling, redness, and edema can be relieved pre- and post-operative considerably faster than with conventional therapies. Because it can be used at an extremely early stage, wound healing processes are stimulated and accelerated, local inflammation is inhibited, and pain is significantly reduced over a sustained period. Scar quality is also improved. For traumatic and neurological injuries and damage, HIVAMAT® has a significant edema-reducing effect. It also enables an earlier return to active forms of therapy and activities of daily living.

Faster Recovery

Decisively shorten the amount of injury recovery time due to the fast and pronounced oscillations produced within the tissues contacted. These Deep Oscillation Therapy® pulsations do two key actions: enhance the movement of lymph through the lymphatic system to reduce any swelling in the area due to inflammation; limit pro-inflammatory cell movement in the wound region to minimize inflammation and encourage more rapid tissue healing.
